Psychodynamic Techniques: Working With Emotion In The Therapeutic Relationship

KAREN J. MARODA
Synopsis

Helping therapists navigate the complexities of emotional interactions with clients, this book provides practical clinical guidelines. Master clinician Karen J. Maroda adds an important dimension to the psychodynamic literature by exploring the role of both clients’ and therapists’ emotional experiences in the process of therapy. The book discusses how to become more attuned to one’s own experience of a client; offer direct feedback and self-disclosure in the service of treatment goals; and manage intense feelings and conflict in the relationship. Specific techniques are illustrated with vivid case examples. Maroda clearly distinguishes between therapeutic and nontherapeutic ways to work with emotion in this candid and instructive guide.

Customer Reviews

"Maroda clearly describes how the psychotherapist's emotional responses to the patient's communications are essential to the change processes that lie at the core of the therapeutic relationship. Her clinical model for working more deeply in the affective realm is solidly grounded in interpersonal neurobiology. This extraordinary book is filled with practical information and rich case vignettes. I highly recommend it."--Allan N. Schore, PhD, Department of Psychiatry and Biobehavioral Sciences, University of California, Los Angeles

"Maroda's proven skill at highly instructive use of courageous self-disclosure is superbly displayed in this revealing work on that rarest of topics: specific elucidation of technique in dynamic therapy. Full of practical advice and illuminating case material, this book is a godsend for therapists."--Thomas G. Gutheil, MD,
Maroda brings such a wealth of seasoned clinical experience and wisdom to this book that it inevitably will be an invaluable resource. She offers a treatment-oriented presentation that is sophisticated yet lucid and pragmatic."--Edgar A. Levenson, MD, William Alanson White Institute, New York City

"Though intended primarily for inexperienced clinicians, this book has much to offer therapists at every level of practice. It is in equal turns scholarly and eminently practical, and imparts the clinical wisdom of a senior therapist who is willing to discuss the intricacies of clinical process with emotional and professional candor. The multidimensional clinical illustrations are evocative and elegantly crafted. Highly recommended."--Jerrold R. Brandell, PhD, Distinguished Professor, Wayne State University School of Social Work; Editor-in-Chief, Psychoanalytic Social Work

"With this engaging, readable book, Maroda answers a long-standing need for a primer on psychodynamic technique. In her characteristic melding of professional and personal experience, theoretical sophistication, research findings, and plain-spoken common sense, Maroda serves up a banquet of good advice that will nourish not only students and beginning therapists, but also experienced practitioners. She keeps the focus on the practical and generously illustrates her points with clinical vignettes that exemplify the emotional honesty she so consistently recommends. I look forward to assigning this welcome text to my graduate students in clinical psychology."--Nancy McWilliams, PhD, ABPP, Graduate School of Applied and Professional Psychology, Rutgers, The State University of New Jersey

"This is an outstanding contribution by a master clinician. Maroda takes the reader on an intimate tour of becoming a good psychotherapist. Her generous use of case examples allows the reader to enter into her consulting room, and illustrates the nuances of various dynamic methods. This book should be mandatory reading for graduate students facing the trepidation and uncertainty of immersing themselves in clinical practice."--Jon Mills, PsyD, PhD, ABPP, private practice, Ajax, Ontario, Canada

"What makes Maroda’s work particularly remarkable, however, is that she not only manages to identify and explicate aspects of technique, but that the range of skills she addresses all converge on what can seem like an especially mystifying topic to new clinicians: the use of emotion in the therapeutic relationship. Maroda’s pragmatic tone seems to effortlessly weave concrete skills through the particularly vaporous topic if using emotion productively. The result is an admirably unmechanistic set of principles to aid clinicians in navigating the complex emotional terrain of the therapeutic relationship in a manner consistent with their own personal styles. One of the major strengths of Psychodynamic Technique is its breadth, and Maroda provides a good balance, including both general and specific issues related to the role of emotion in the therapeutic process.... The annotated bibliography of both theoretical and practical literature is a
valuable resource....Maroda's direct, clear, honest language models an approach for which all clinicians should strive. In addition to her own experience as a therapist and supervisor, she draws from a wide range of sources, including recent neuroimaging studies, relevant research on affect and attachment, as well as psychodynamic theory. These multiple perspectives will likely enrich any reader's understanding of even the most well-worn issues of psychodynamic practice....The process of reading the book parallels the process of a successful therapy in which one has come to engage with and trust her guide and emerges a more flexible, confident, insightful person and professional. Maroda's continued reassurances and frank openness to sharing her own vulnerabilities leaves the reader feeling infused with a sense of possibility that a fuller, deeper therapeutic relationship is possible....I finished Psychodynamic Techniques with a feeling of confidence that the tools necessary to work with emotion in the therapeutic relationship are readily available."

(Psychotherapy 2012-10-20)"Maroda has something worthwhile to share with us regarding the essential ingredients of therapeutic change....This simply and straightforwardly written book is the work of a courageous, emotionally honest, skilled, and wise clinician. It is a book that succeeds beautifully in fulfilling its mission: that emotional resonance or affective emotional communication between client and therapist is critical to the change process and constitutes the essential core of the therapeutic relationship. In the spirit of the phenomenological approach to understanding, this reviewer has remained close to the author's own wordsâ•words that revealed richly rewarding insights regarding the theme of change, insights that have concrete consequences for the actual practice of psychotherapy....Those of us who are interested in rigorously researching and understanding what therapists actually do inside the consulting room, in general, and, more importantly, how therapy worksâ•how the therapeutic change happens, in particular, would do well to mine such outstanding works as Maroda's. By systematically studying such works, which are experience-near and thus incipiently phenomenological, we can gain a greater understanding of the essential ingredients of therapeutic change." (Journal of Phenomenological Psychology 2012-10-20)"Emotion in the Therapeutic Relationship is a profoundly needed corrective for a wide range of clinicians and academics....Maroda's book is destined to play a crucial role in grounding psychodynamic theory in empirical demonstrability and practical utility, serving as the basis for any thorough-going clinical technique. This book serves as one of the few linchpins that just may resituate psychodynamic theory as the cornerstone of sound clinical theory and technique....Maroda illustrates all of the basic principles with honest and explicitly detailed case examples from her own practice....This book is an empirically substantiated, practical guide to the therapeutic landscape. I know a young woman about to enter graduate school in clinical psychology for whom I have already
bought this book as a gift to celebrate her budding career. More importantly, I will use this text in my teaching of both trainees and more experienced clinicians."

"The book contains a wealth of practical suggestions for managing emotional interactions with clients, distinguishing between therapeutic and non-therapeutic ways to work with emotion. The shared hopes, fears and expectations of therapist and client are initially discussed, progressing on to the more complex emotional experiences encountered in the developing therapeutic relationship. The author interweaves her own case study experiences into each chapter and explores rarely addressed topics, including identifying and managing regression, implementing self-disclosure and using conflict effectively. This book is a fascinating and valuable resource for new and established therapists. By exploring and applying the guidelines Maroda offers, therapists can create a body of useful psychodynamic techniques for effective therapy."

"A profoundly needed corrective for a wide range of clinicians and academics. Maroda has integrated current findings in psychological, psychosocial, attachment/developmental and neurophysiological research with the emerging empirical literature on the efficacy of long-term psychodynamic psychotherapy. Her timing is impeccable....Maroda’s book is destined to play a crucial role in grounding psychodynamic theory in empirical demonstrability and practical utility, serving as the basis for any thorough-going clinical technique. This book serves as one of the few linchpins that just may resituate psychodynamic theory as the cornerstone of sound clinical theory and technique. Pitched to new trainees, this book offers much to those who teach psychodynamic psychotherapy to the neophyte as well as the more experienced....Maroda illustrates all of the basic principles with honest and explicitly detailed case examples from her own practice. She has an engaging writing style, revealing personal reactions and recalling the felt-sensations when she was a beginning therapist. The 'sweaty palms' and 'queasy stomach' we all experienced is part of her charm; any writer willing to open herself up in this way plants a treasure trove of seasoning throughout. She could not be more generous with explicit examples from her clinical experience, including word for word reproductions of her interventions, thought processes, doubts and feelings....This book is an empirically substantiated, practical guide to the therapeutic landscape. I know a young woman about to enter graduate school in clinical psychology for whom I have already bought this book as a gift to celebrate her budding career. More importantly, I will use this text in my teaching of both trainees and more experienced clinicians....This book is an important addition to any therapist’s library."

"Written primarily for new therapists, this book has a broader appeal....Extends our understanding of the psychodynamic
Karen J. Maroda, PhD, ABPP, is Assistant Clinical Professor of Psychiatry at the Medical College of Wisconsin and is in private practice in Milwaukee, Wisconsin. She is the past ethics chair and a board member of Division 39 (Psychoanalysis) of the American Psychological Association and past president of Division 39’s Section III, Women, Gender, and Psychoanalysis. The author of two previous books, The Power of Countertransference and Seduction, Surrender, and Transformation, Dr. Maroda has also published numerous journal articles, book chapters, and book reviews. She lectures nationally and internationally on a variety of aspects of the therapeutic process, including the place of affect, self-disclosure, countertransference, legitimate authority, and the need for clinical guidelines. Dr. Maroda is on the editorial board of two major journals, Psychoanalytic Psychology and the Journal of Gay & Lesbian Psychotherapy, and is corresponding editor of Contemporary Psychoanalysis; she actively encourages her colleagues to write and talk about what they actually do as therapists.

I am a 4th year PsyD student who has a descent background in psychodynamic theory and I found this book incredibly helpful and accessible. It is a great model in working with emotion in general, even for those who are not exclusively psychodynamic/psychoanalytically oriented. I recommend this book to anyone interested in emotion-focused work and are open to examining their own process in relationship to their patients. I found the section on working with emotion in Borderline psychopathologies particularly helpful. Thanks!

GrEat

I usually write a review because I am asked to do it. However, I am choosing to write a review on this book because it touched me in so many positive ways. This book is a must for anyone that is looking for more insight, intellect, or tools to become a better professional and/or individual. I am in AWE...with this book.I have learned so much about myself fromt his bookthat it has inspired me to even write a book later on about my experiences. I would recommend this book to anyone that would like to become better in any way. I would also be contacting the Author of this book so I can thank her for such brilliant work.

This is an excellent, readable resource for all types of mental health practioners. Maroda shares her
wisdom from more than two decades of practice with memorable vignettes and accessible language. In a forthright manner she address difficult therapeutic issues such as erotic transference and countertransference as well as more mundane issues such as phone calls, email, gifts and fees. This is a wonderful resource for anyone who desires to be a competent, ethical and courageous healer of the psyche. The title should not put off theorists who are not psychodynamic theorists, although certainly they are her intended audience.

This is one of the more clinically useful books I have read. If you like Nancy McWilliam's work, you will like this book. It goes more into depth on how to use emotions and read clients in therapy. I highly recommend this book, not only to early career, but to mid and later stage psychotherapists.

I am a counseling intern who is psychodynamic in orientation but my supervisors don't know how to guide me in this direction because they are of different orientations. This book is a great general map to working with emotion in a psychodynamic way and provides tons of good tips and pointers for me. I am definitely going to order more books by this author.

Great read.

Karen Maroda is pretty much a badass. The way she talks about anger is refreshing. She writes, "My own analyst often played down my anger toward her and others, typically pointing to underlying motivations, such as being hurt or feeling too vulnerable. Depending on the circumstances, this approach can be valuable and vital to self-understanding. But it represents only one aspect of self-awareness, and does not address the need to identify, accept, and make decisions about expressing negative feelings without shame." Word. Not all my anger is a defense against vulnerability or a projection of my internal bad object: sometimes I'm just righteously pissed! Her paper "Enactment" is also great- about when therapists unconsciously re-enact their own past with a client and pass it off as the client's issues, thereby traumatizing the client (and ultimately themselves too).
