Introduction To Aviation Insurance And Risk Management

Synopsis

The third edition of Introduction to Aviation Insurance and Risk Management has provided the opportunity to improve the book and extend its life into the 21st Century. Old material has been deleted and newer, more timely material added. Unlike the previous editions a number of industry professionals have contributed to the new version. Despite these changes the primary purpose of the book remains the same--to introduce the basic principles of insurance and risk with their special application to the aviation industry. It has been designed for several similar, yet distinct audiences: the college student, corporate pilots or fixed base operators, and individuals in the insurance business.

Customer Reviews

Alexander T. Wells, Ed.D. is currently the academic director of the Aviation Insurance Association (AIA) Educational Institute. Starting his insurance career as an aviation underwriter with Royal-Globe Insurance Companies in 1960, he subsequently was a broker with Rollins Burdick Hunter Company in Chicago. Retiring in 1998 after a 26-year teaching career, he presently serves as an adjunct professor of aviation business administration at Embry-Riddle Aeronautical University. Bruce D. Chadbourne, Ed.D. graduated from the University of Florida with a major in property and casualty insurance. Starting as a general agent with Aetna Life Insurance Company where he earned the Chartered Life Underwriter (CLU) designation, he held a number of management positions before entering the teaching field in 1973 with Embry-Riddle Aeronautical University where he is presently a professor of aviation business administration.

Now in an updated and expanded third edition, "Introduction To Aviation Insurance And Risk Management" is the collaborative effort of Alexander T. Wells (Academic Director of the Educational Institute of the Aviation Insurance Association) and Bruce D. Chadbourne (Professor of Aviation Business Administration, Embry-Riddle Aeronautical University). This new edition features informed and informative contributions by a number of aviation and insurance industry professionals, a glossary, an appendix, self tests, and an index. Strongly recommended reading for students of the aviation industry, airline corporate executives, corporate pilots, fixed based operators, and insurance business professionals, "Alexander T. Wells & Bruce D. Chadbourne" is an essential instruction manual presenting the basic principles of insurance and risk as they apply to the aviation industry. Also very highly recommended and related title from the Krieger Publishing Company are "General Aviation marketing And Management" (1575241927, \$68.50) by Alexander T. Wells and Bruce D. Chadbourne, and "Commuter Airlines" (0894649477, \$59.50) by Alexander T. Wells and Franklin D. Richey.

I was looking forward to reading this book because the stories and systems involved with insuring massively valuable risks are so interesting. This book has been a let-down because the very poor editing and clearly outdated material obscure and distract from the interesting subject it tries to cover. The book is rife with grammatical errors such as run-on sentences, comma splices, and incomplete phrases. Some of the information has clearly not been updated in over a decade, and it leaves me wondering whether or not anyone actually read through the book before sending it to press.

This textbook is an excellent resource for those students interested in developing a knowledge base in aviation insurance and risk management. The text describes the various policies available for pilots, and aviation related companies. It also outlines the many types of risk management techniques used to ensure company solvency. The authors have made a very large and complicated subject into something more understandable.
