Customer Reviews

"This is an excellent text of non-malignant paediatric haematology, carrying on the well established tradition of previous editions... The book is underpinned by inclusion of up-to-date information about the pathogenesis of haematological diseases, which is especially important given the huge contribution of molecular geneticists to the understanding of paediatric haematology, and vice versa." BMA Book Awards 2009 - judges comments "This is the gold standard reference in pediatric hematology, an indispensable tool for the offices of practicing pediatric hematologists... it also is an excellent resource for general pediatricians, providing basic information on the hematology of children... The seventh edition updates, preserves, and fulfills the objectives set out by the original editors, David Nathan and Frank Oski, in 1974." - Doody's Review, 4 Stars

A classic peds hematology book, no hem/onc fellow/attending should be without this book as a reference. A thorough and complete guide to peds hematology.

The book arrived promptly and in excellent condition. It is a great reference. I highly recommend this book to others

For over 35 years Nathan and Oski's Hematology has been the precious companion for the pediatrician in pediatric hematology or the pediatrician on the ward looking for answers to thorny clinical questions. The present heavy book on my desk is the seventh edition. The oncology part of this book has been taken out in this edition and a new textbook (Oncology of infancy and childhood) created to deal with this vast field (see another review in this issue). Personally I am very fond of history, because I believe it is important to know our past in order to understand our present and future, so I am very delighted to again see the first chapter of this book with the history of pediatric hematology put in perspective by Wolf Zuelzer, who passed away in 1987 and updated by David

Nathan. I am especially happy to see the reference to two of my mentors from my time at the University Hospital (Rigshospitalet) in Copenhagen, Svend Heinild (1907-1994) and Preben Plum (1906-2002), who as general pediatricians also contributed to the field of hematology with their research and treatment. The chapter on the Thalassemias is also very profound and saw the discussion of the alpha Thalassemia with intellectual disability/mental retardation, which is rare but maybe an under-diagnosed entity. All in all a book that should be in the library of every pediatric department around the world.
