I found this book great for anyone who wants to start stained glass. Needed supplies, basic techniques regarding every aspect to get rolling. Cutting angles, and circles, foiling and soldering, much more, I dont think I could of started without it. If your at all interested in stained glass, this book is a must. Any questions you have, this book covers it. Well worth it! Also useful as a reference manual. Good luck!

Great beginner book.

I bought this book as an addition to my stained glass class through the local high school. It is great. It helps fill in the gaps and reminds me of what I forgot. This book covers both copper foil and leading. While I can't speak for the leading, it has excellent information on the copper foil method. It's information on equipment is also up to date. Though the cover is in color the rest of the book is in black and white. This is probably why a book so jam packed with information, was so inexpensive. I didn't find the black and white photos to be a negative at all. There are pictures of everything and this is great. So many books just give you patterns and words. Its tips on glass cutting I found very useful, since you don't always run into everything in class. It saved me some broken glass. Its troubleshooting hints on soldering were handy as well. Also there are some projects in the back. I haven't made any but they have complete instructions (pictures too) and the patterns included. The contents since ... does not provide it, is as follows: 1. HISTORY - GLASS Glass making, Stained glass, Jewels, Nuggets and Bevels, Color selection, 2. TOOLS OF THE TRADE Glass cutters, Pliers, Soldering Irons and Accessories, Lead tools, Miscellaneous Equipment, Safety Equipment, Grinding Equipment, 3. SUPPLIES Supplies, Work Surface, Lead Supplies, Copper Foil Supplies, Shopping list, 4. GLASS CUTTING Theory, Holding the Glass Cutter, Scoring the Glass, Breaking out the score, Scoring using a straight edge, Grozing, Cutting inside curves, Cutting Circles, Semi-circles or ovals, Cutting large sheets, 5. WORKING WITH PATTERNS Pattern Making, Using a Pattern for Glass cutting, Photocopying your patterns, 6. CONSTRUCTING A LEADED PANEL Introduction, Step by Step Instructions, Lead Soldering, Cementing, 7. CONSTRUCTING A COPPER FOILED PANEL Introduction, Step by step instructions, Soldering copper foil, Solder Troubleshooting Hints, 8. CONSTRUCTING A COPPER FOILED LAMPSHADE Step by step instructions, Alternate Assembly method, Special Construction, Joiner pieces, Square corner construction, 9. FINISHING YOUR PROJECT Hanging hardware, Spider, Vase caps, Frames, Antique Patina, Polishing or Waxing, Overlay Details, Cleaning your project, Reinforcing your window, Replacing a cracked foil piece, 10. FULL SIZE PROJECTS Diamond panel (Bevels), Sunburst panel, Butterfly, Rainbow and Cloud, Standing Angel, Dove, Fruit Cluster, Six Sided Flower pot, Eight Sided Flower pot, Traditional cone lamp, Classic Lamp, Floral Lamp, Floral Tray with Dividers, Floral Lidded Box, Sailboat Panel, Cattail Panel, Floral Panel,

love it

If you've never touched stained glass, this book is great. Its got accurate info on leaded and copper foil glass, and projects that progress from easy to difficult. However the book feels a bit thin, and as mentioned already the inside margin along the book spine is less than 1/4", meaning you absolutely have to cut all the patterns out of the book with a razorblade very carefully. If you've been doing glass a while, I would look for a different book.

An easy to follow guide for making stain glass art.

Great patterns and instructions for the beginner. Would purchase again if I lost this book! The patterns included at the end of this book really help the beginner get a thorough grounding in the art of stained glass.

Brilliant book not only beginners!
