The Cosmic War: Interplanetary Warfare, Modern Physics, And Ancient Texts: A Study In Non-Catastrophist Interpretations Of Ancient Legends

Synopsis

Presents the history of the Exploded Planet hypothesis. Rejecting naturalist and materialist assumptions of catastrophism forwarded by other researchers, this work asserts that the causes are based in ancient myths of a Cosmic War in the heavens.

Book Information

Paperback: 425 pages

Publisher: Adventures Unlimited Press; First Edition edition (February 25, 2015)

Language: English

ISBN-10: 1931882754

ISBN-13: 978-1931882750

Product Dimensions: 6.1 x 0.9 x 9.1 inches

Customer Reviews

Joseph Farrell is an Oxford educated historian who specializes in alternative history, World War II and secret technologies. Raised in Kansas, he has had a wide range of jobs and is currently a full-time author and researcher. His many books include: The Giza Death Star Trilogy; Reich of the Black Sun; The SS Brotherhood of the Bell; Nazi International; Secrets of the Unified Field; Roswell and Reich; The Cosmic War; Grid of the Gods; Saucers, Swastikas and Psyops; Covert Wars and Breakaway Civilizations; Thrice Great Hermetica and the Janus Age; Transhumanism and others.

Oxford educated researcher Dr. Joseph P. Farrell unleashes a reverberating hypothesis regarding ancient history whose echoes will be forever heard. Cosmic War - Interplanetary Warfare, Modern Physics & Ancient Texts by Dr. Joseph P. Farrell is an extremely intriguing incursion into the possibility of a very ancient war in high antiquity. Dr. Farrell's hypotheses of an Ancient Interplanetary War is argued in an in-depth, precise and reasonable approach. The extensive evidence Farrell collates and synthesizes in this particular book will leave the reader aghast with the possibilities. Intriguingly enough, many ancient cultures stated that the 'Wars of the Gods' were quite

real. Predictably, even though there's extensive evidence for advanced physics, advanced weapons, ancient [millions and BILLIONS of year old artifacts found by reputable sources], the establishment has painted all over ancient history with myth. Regarding this very issue, Jim Marrs in his book *Our Occulted History*, sets his cross hairs on this very issue: "The term mythology stems from the Greek word *mythos*, simply meaning words or stories reflecting the basic values and attitudes of people. In past ages, when the vast majority of humans were illiterate, easily understood parables were used to educate people about history, science, and technology. During the Dark Ages, when most of people were taught that the Earth was flat, the word mythology was changed by the Roman Church to mean imaginative and fanciful tales veering far from truthfulness. This small change in semantics has caused untold damage in current perceptions." [1] Ironically enough, there is starting to be more and more evidence of 'myths' now turning out to be fact. As Chris Hardy Ph.D remarks in her poignant book *DNA Of The Gods*: "...let's remember that, before the discoveries of loads of ancient tablets written in the pictographic Sumerian language (Late Uruk period, fourth millennium BCE), the kingdom of Sumer was believed to be a myth. We had already discovered Akkad and deciphered Akkadian, and still archaeologists wouldn't give credence to the numerous carved references, within historical dated records, to a line of kings whose title was "King of Sumer and Akkad". [2] [3] Or how about the "myth" of Troy: "This myth collapsed in 1865 with archeologist Frank Calvet's discovery of the historic ruins of not only one city of Troy but nine layers of it! The city, whose siege is recounted in Homer's *Iliad*, is only Troy VII, the seventh level underground, dating to the thirteenth century BCE." [4] And notwithstanding: "...according to geologist Robert Schoch, who, in 1990, worked with the renowned pioneer Egyptologist John Anthony West, the vertical erosion of the Sphinx was due to heavy and extensive rainfall that happened in the region between 10,000 and 5,000 BCE, thus dating the Sphinx's construction to at least 7,000 to 8,000 years ago) according to Schoch's conservative estimate). What was the reaction of conventional archaeologists? Here is one: Zahi Hawass, Director General of Giza, was asked in an interview on the PBS series *NOVA* if it was possible that a more ancient civilization might have built the pyramids and sculpted the Sphinx. Hawass replied: "Of course it is not possible for one reason...No single artifact, no single inscription, or pottery, or anything has been found until now, in any place to predate the Egyptian civilization more than 5,000 years ago." [5] That last passage in particular showcases the inherent dogma that we as a society have had to deal with. The gatekeepers, for many reasons, want to keep established history in a nice little box. Fortunately, as anyone who has extensively research these topics know, there's more than ample evidence that shows that at minimum history isn't what we have been told. In any case, *Cosmic War* covers wide ranging but

pertinent topics such as Van Flandern's exploded planet hypothesis, an analysis of plasma in relation to weapons that employ scalar physics, petroglyphs which show plasma instability glyphs that were recorded by ancient cultures, remnants of giants in ancient history, optical phase conjugation, the story of the 'gods' as related through ancient texts, pulsars, generational charts of the 'gods', the scarring of The Valles Marineris being possibly from a weapon, Iapetus and its hexagonal craters, and a LOT more. The ramifications of this book abound, and filter in all aspects of our lives. Dr. Farrell gives us more reasons [coupled with countless others in his other trenchant books] as to why we need to give history, particularly ancient history, a very long and thorough look. In its totality, this book is a veritable fountain of information that is scholarly in precision, and thought-provoking in its ramifications. This book is a must read for anyone interested in ancient history, ancient civilizations, and any of the topics there in. There is more than enough information to make the reader curious about our past in more ways than they can really imagine. Kindest Regards, Zy

If you are a product of the standard education system, you will have been taught that the Earth is the only habitable planet in our solar system and human beings are the only race that has ever lived here. You will have been taught that the ancient world was much more primitive than our world and that the monolithic structures like the Pyramids were built by thousands of slaves using basic tools. You will know that our Moon is pockmarked with craters from asteroids. You might have heard that dinosaurs were wiped out by meteors thousands and thousands of years before human beings arrived on the scene. If you studied ancient myths and religions, you were taught that they were fairytales invented by primitive (ie stupid) people to explain things they didn't understand. Modern man doesn't take ancient myths literally because - of course - they're myths. Made up stories with no basis in fact. As for modern physics - it's way too complicated for mere mortals to understand in this generation. That makes it impossible for our ancestors. Dr Farrell is a very unusual researcher because he is trained in both Physics and ancient mythology. He uses both fields of knowledge to unpack the subject in this book. Ancient myths, across the planet, report events from long, long ago in surprisingly consistent ways. These ancient peoples claimed to have witnessed war in the skies

and in our solar system. They tell us of the gods who stole from each other and went to war because of it. Those stories have been dismissed in the past because we assumed that human beings couldn't have been present on the Earth that long ago, therefore, their stories aren't based on their personal experiences. We have assumed that these stories were not true. More recent advances in our ability to see other planets in our solar system have taught us that the stories about ancient wars might not be so fanciful after all. There is abundant evidence of devastation on other planets around us. The Asteroid Belt could well be the debris from a planet that exploded millions of years ago. The most advanced theoretical physics is only now helping us to conceive of weapons that can blow up planets and cause massive collateral damage. In this detailed investigation, Dr Farrell shows us how advanced physics combines with ancient mythology to provide a compelling case in support of ancient tales of massive warfare in our own solar system, millions of years ago. Dr Farrell investigates the biblical record as well, finding that the Old Testament is consistent with stories from other cultures. Again, this is not light reading, but Dr Farrell is a gifted organiser of facts. He provides a framework within which to compare the different kinds of information, making it easier to negotiate the topic. Now that I have read this book, I shall turn to his Giza Death Star series for more information. Dr Farrell's reputation for painstaking, detailed, comprehensive research is richly deserved.

What a mind bender. I will be reading all of Farrell's books. If you ever had an inkling of thought that there is more to our world, politically, socially, monetarily, physically etc. Farrell's well researched and thought out works will give you new perspective on it all. I am not a 'science guy' so some of the discussion is out of my knowledge base but other content allowed me to understand the larger points that were being made. If you are into studying history and current events but have become bored with the same, tired narratives, Farrell's books will re-ignite your love of learning about the human experience.

Not being well educated in the sciences, I found this book difficult to understand in terms of technology. However, I loved how the evidence for human or human-like individuals living up to billions of years ago on the earth was presented. I would highly recommend this book to anyone with an open-minded desire to learn how mythology and ancient relics as well as physics are drawn together to support a fascinating view of life and cosmic war in our solar system.

he does a good job of looking at such a strange and incredible subject as objectively as possible,

given the scant nature of evidence, and how far outside the norm such a subject pushes oneself. that said, it has been a great read so far, as many books show, there is so much scientific data out there the average person is not privy to, or doesn't care to learn, so as you read some of it it isn't a total shock that there is so much we are in the dark about. leave it to modern man to hide things we don't know about as to not look foolish.
