Synopsis

Now in full color, this comprehensive reference provides current information on all parasites commonly encountered in veterinary medicine. Its primary focus is on parasites that infect major domestic species, such as dogs, cats, horses, pigs, and ruminants. This edition also covers organisms that infect poultry, laboratory animals, and exotic species. And with this book's coverage of minor and rare parasites, you'll be able to diagnose more difficult cases. No other book in this market is so respected and so complete. It's the only parasitology reference that provides everything you'll need! Thorough coverage describes parasites that infect most major domestic species, and also includes organisms that infect poultry, lab animals and exotic species. A convenient appendix includes six drug tables listing parasiticides by species and a table of commercial antiparasitic vaccines, for easy access to the most up-to-date drug information. Greek and Latin roots of terms are arranged alphabetically on the inside front and back covers, providing a quick reference when you're in a hurry. Over 800 full-color photos and line drawings help you identify parasites accurately. A new introductory chapter provides an overview of parasitology. A new Vector-borne Diseases chapter restates viruses, rickettsiae and other bacteria, protozoa, and helminths in terms of vectors.

Customer Reviews

"New to the eighth edition is a table of scientific names and the roots from which they were derived.

This table, listed on the inside front and back covers for easy access, should make it easier to learn the many scientific names encountered in the book. The book is packed with valuable information for veterinary practitioners engaged in the treatment and prevention of parasitic infections and infestations. The book is a very readable and a useful reference, covering important parasites and diseases encountered in veterinary practice. Just as the title suggests, it presents the essential knowledge base of parasitology for veterinarians."-Veterinary Pathology 42:2, 2005 --This text refers to an out of print or unavailable edition of this title.

My parasitology professors, Dr. Michael Dryden (aka Dr. Flea) and Dr. Patricia Payne (American Heartworm Association), highly recommend this book. It's written by a husband and wife DVM team, and you can tell they enjoyed writing the book. Not everything is completely up to date (probably impossible with anthelmintic protocols changing daily, but it is a great reference with really great reference pictures for ID>

Finally, a truly all encompassing text on veterinary parasitology. The information is very well organized, succinct, and relevant. The all encompassing aspect is the addition of an excellent chapter on the histopathological diagnosis of parasitic diseases. Veterinary pathologists now have an excellent resource with very nice images and written descriptions of the salient features of all taxonomic groups of parasites. I highly recommend this text to any pathology resident preparing for board certification.

Perfect.
