Many people suffer from diabetes due to one reason or another. This book shows the different foods that you can eat if you are suffering from the condition. It mentions certain fruits and vegetables, like Kale and Garlic, that are great diabetes fighters. There are also numerous cereals and grains that are mentioned that can help you to combat the illness. Lifestyle changes are also necessary to help reduce the effects of diabetes. This book is for those who are at any stage of diabetes. It is quite comprehensive. As such, I am going to recommend it to a few people I know have diabetes. If you are concerned about your health, I would advise you to read it too.

Diabetes is always a bad news as it affects not only one's health but also the well being of

the family. A patient will try his/her best to get treated and find ways to reverse the condition if possible. Fortunately, this book may provide that alternative method to reduce or reverse diabetes. Since diet plays an important role in the bodily function, it is obvious that in order to improve one's health, one needs to adjust his/her diet. The book provides suggestion on what super-food, herb and spices to take and foods to avoid if you are diabetic. It comes with recipes that are suitable for breakfast, lunch and dinner. Diet aside, the book also outlines some exercises that are suitable for a diabetic patient.

As a family member has recently been diagnosed with diabetes, I wanted to find out more about it as I've never really understood it. This guide gives you a sound understanding of the different diabetes types, along with their symptoms. I found the best bit of the book was the explanations of what food you should and shouldn't eat if you have diabetes. There were even recipes included to give you ideas for meals. Overall, this was a solid guide that definitely improved my understand and will allow me to better relate to my family member that has diabetes. I will be suggesting the different types of 'superfoods' that they should eat!

The book was a great choice in giving some information, not only the basics of eating rights and exercising, but also on essential oils and supplements that can be used to help with the process. This guide will show you that diabetic recipes can be both nutritious and exciting and will keep you satisfied. Diabetics must be controlled and this book will be a great one will help you in that by replacing your existing recipes with this.

This is a must read book for everyone whether you have diabetes or not. The book needs a tiny bit of editing with the fonts and all. The first chapter of this book defined, in very brief detail, about diabetes, symptoms and all. Then there are the following chapters where you'll find a list of DO-EAT super foods for diabetes. Its not just a simple list, but there is a good and worthy description for each food explaining their purpose. These are invaluable when it comes to preparing a whole meal customized to suit my preference. There are also some recipes included.

I was hoping to gain new knowledge from this book, but I was fairly disappointed after reading it. It is a good first read for people who want to know more about what to and not to eat for diabetes. In addition, the information offered is too generic. It would have been better, if possible to include some successes of diabetes following the recommendations from this book.

I think this book is not only for those who has diabetes actually. This book tells you about different types of food - fruit, cumin, milk, cinnamon, ginger etc. and explains what they do with your body and blood sugar. I've learned how to prevent diabetes and how to eat healthier. Every information about better diet is really important for me so thank you for this book.

Love it! I was surprised by the cookbook at the end. Very nice touch. I will be sharing this with my family and friends who struggle with the diabetic diet. This will excite, I'm positive. Information packed and right to the point. A very easy and enjoyable read.
